KERALASE HAIR RESTORATION PRE + POST CARE

PRE TREATMENT INSTRUCTIONS

- Wash hair the night before or morning of treatment. Hair must be clean and free of products.

POST TREATMENT INSTRUCTIONS

- Avoid washing and heat styling for 24 hours.
- You may experience mild side effects such as redness at the treatment area, as well as warm and/or tingling sensations for a few hours after your treatment.
- You may notice hairs in the telogen phase (resting phase) may be shed post procedure.

FOLLOW-UP TREATMENT

- For best results, a 6 treatment schedule is suggested on a monthly basis with one maintenance treatment every 3-6 months. While everyone is different, improvement in scalp health and an increase in the appearance of thicker, healthier hair may be visible within 3 months. Most patients see more improvement over the next 2-4 months.
- We cannot guarantee a response for ALL patients. Between visits, we recommend the Keralase Scalp Stimulating Solution, which has 5 growth factors and 2 skin proteins. These growth factors are exactly the same as you will find in the in-office treatment; however, this product was designed to be used daily, in order to micro-dose your scalp and hair between in-office visits. This can be purchased in our office or at <https://shop.mykerafactor.com>.
